## 2300 – 6000 MHz Dual LNA

### Product Description

The TQP3M9041 is a high linearity, ultra-low noise figure dual device amplifier in a 4x4 mm package. At 2600 MHz in a balanced configuration, this LNA provides 18.4dB gain, 20.2 dBm IIP3 and 0.8 dB noise figure. The part does not require a negative supply for operation and is bias adjustable for both drain current and voltage. The device is housed in a green/RoHS-compliant industry standard QFN package.

The TQP3M9041 consists of a single monolithic GaAs E-pHEMT die and integrates bias circuitry as well as shut-down capability allowing the LNA to be useful for both FDD and TDD applications.

The TQP3M9041 is optimized for the 2500–2700 MHz band and also can be used outside of the band. Qorvo offers pin-compatible dual LNAs for 500–1500 MHz (TQP3M9039) and 1500–2300 MHz (TQP3M9040). The balanced amplifier is optimized for high performance receivers in wireless infrastructure and can be used for base-station transceivers or tower-mounted amplifiers.
