## 0.6 – 5.0 GHz High Linearity Pre-Driver

### Product Overview

The QPA9442 is a wideband, high linearity driver amplifier. With optimized tuning, this device can provide up to 19dB of gain and achieve an output P1dB of 1W. The amplifier can provide excellent linearity performance with +46dBm output 3<sup>rd</sup> order intercept (OIP3), making it perfectly suited for 5G base station applications.

The QPA9442 is tunable over all cellular bands in the entire operating frequency band of 0.6 – 2.8 GHz and incorporates a shut-down function through the V<sub>PD</sub> pin.

The QPA9442 is housed in a 20-pin 4X4mm SMT package.

Pad Configuration and Description

Top View

Pad No.	Label	Description
1, 2, 4, 5, 7, 8, 9, 10, 11, 14, 15, 17, 18, 19	GND	RF/DC ground connection.
3	RFIN	RF input. External DC block required.
6	NC	No electrical connection internally. It may be left floating or connected to ground. Land pads should be provided for PCB mounting integrity.
12, 13	RFOUT / V <sub>CC</sub>	RF output and DC supply. External choke and DC block capacitor required.
16	V <sub>BIAS</sub>	Bias circuit supply voltage.
20	V <sub>PD</sub>	PA on/off logic control.
Backside Paddle	GND	RF/DC ground connection. The back side of the package should be connected to the ground plane through as short of a connection as possible. PCB vias under the device as many as possible are recommended.

## Package Marking and Dimensions

Marking: QR Code – Contains device traceability information  
Part No. – A9442  
Trace Code to be assigned by sub-contractor

### Notes:

1. All dimensions are in millimeters. Angles are in degrees.
2. The terminal #1 identifier and terminal numbering conform to SPE-000677.
3. Contact plating: ENEPIG

## Recommended PCB Layout Pattern

### Notes:

1. All dimensions are in millimeters. Angles are in degrees.
2. Use 1 oz. copper minimum for top and bottom layer metal.
3. Via holes are required under the backside paddle of this device for proper RF/DC grounding and thermal dissipation. We recommend a 0.35mm (#80/.0135") diameter bit for drilling via holes and a final plated thru diameter of 0.25 mm (0.01").
4. Ensure good package backside paddle solder attach for reliable operation and best electrical performance.
