# High-Power, Ultra-Broadband Performance & Solid State Reliability Using Spatium® Technology

Patented Spatium RF power combining technology from Qorvo® provides a highly reliable, efficient alternative to traveling wave tube amplifiers (TWTAs) for commercial and defense communications, radar, electronic warfare (EW) and other defense systems. Spatium solutions are readily customizable and dramatically improve broadband RF power and efficiency through patented coaxial spatial combining techniques using Qorvo gallium nitride (GaN) MMIC amplifiers. Spatium's all solid-state construction delivers longer service lifetimes than comparable TWTAs or conventional planar power combining products; they provide clear size, weight, power and cost (SWaP-C) advantages. RF system designers can use Spatium to achieve unprecedented efficiency with output power from hundreds to thousands of watts.

## Benefits of Spatium Technology

- Ultra-broadband operation: up to decade BW
- Efficiently combines 10, 16, 20 or 32 amplifiers
- 93% combining efficiency/high-operating frequency
- Smaller than comparable TWTAs
- High reliability: 7+ years compared to TWTAs
- No limiting microstrip or other legacy architectures
- Advanced product architecture provides graceful degradation
- Lower supply voltage: 20-48V
- Provides instantaneous bandwidth without warm-up time

## Applications

- Electronic warfare
- Satellite & terrestrial communications
- Radar systems
- Test & measurement
