## Product Description

The QM11022A is a dual-pole double-throw transfer switch designed for general purpose switching applications where RF port transfer (port swapping) control is needed. The low insertion loss along with excellent linearity performance makes the QM11022A ideal for multi-mode GSM, EDGE, UMTS, and LTE handset applications. The RF ports can be directly connected in $50 \Omega$ systems and control logic is compatible with 1.3 V to 2.7 V systems. The supply voltage is intended for connection to 2.8 V systems but the device is operable from 2.4 V to 5.5 V . The compact $1.1 \mathrm{~mm} \times 1.5 \mathrm{~mm}$ size offers mobile handset designers an easy-to-use switch component for quick integration into multimode, multi-band systems.

## Power On and Off Sequence

It is very important that the user adheres to the correct power-on/off sequence in order to avoid damaging the part. First apply Vdd before applying a high to $\mathrm{C}_{\mathrm{TL}}$.

## Power On -

1. Apply voltage supply $-V_{D D}$
2. Apply Logic signal - CTL
3. Wait $5 \mu$ s or greater after $\mathrm{C}_{\mathrm{TL}}$ is stable and then apply the RF signal

## Power Off -

1. Remove the RF signal
2. Remove the logic signal - $\mathrm{C}_{\mathrm{T}}$
3. Remove the voltage supply $-V_{D D}$
