

QPA9418

High Linearity 0.5 W Small Cell PA

Product Overview

The QPA9418 is a high-linearity two-stage power amplifier in a low-cost surface-mount package with on-chip bias control and temperature control circuits, suitable for small cell base station applications.

The QPA9418 provides 30.6 dB gain and +27 dBm linear power over the 1805–1930 MHz frequency range. This amplifier is able to achieve –48 dBc ACLR at +27 dBm output power using 20 MHz LTE signal.

The QPA9418 integrates two high performance amplifier stages onto a module to allow for a compact system design and requires very few external components for operation. The amplifier is bias adjustable allowing the amplifier's power consumption to be optimized. The QPA9418 is available in a 7 x 7 mm surface mount package.

Mechanical Information

Package Marking and Dimensions

Marking: Part number – QPA9418

Trace code – Assigned by sub-contractor

Notes:

1. All dimensions are in millimeters. Angles are in degrees.
2. Dimension and tolerance formats conform to ASME Y14.4M-1994.
3. The terminal #1 identifier and terminal numbering conform to JESD 95-1 SPP-012.

PCB Mounting Pattern

Notes:

1. A heat sink underneath the area of the PCB for the mounted device is strictly required for proper thermal operation. Damage to the device can occur without the use of one.
2. Ground / thermal via holes are critical for the proper performance of this device. Via holes should use a .35mm (#80 / .0135") diameter drill and have a final plated thru diameter of .25 mm (.010").
3. Add as much copper as possible to inner and outer layers near the part to ensure optimal thermal performance.
